

# BPL\_YEAST\_COB\_Batch script with FMPy

The key library FMPy is installed.

After the installation a small application BPL\_YEAST\_COB\_Batch is loaded and run. You can continue with this example if you like.

## BPL\_YEAST\_COB\_Batch setup

Now specific installation and the run simulations. Start with connecting to Github. Then upload the two files:

- FMU - BPL\_YEAST\_COB\_Batch\_linux\_om\_me.fmu
- Setup-file - BPL\_YEAST\_COB\_Batch\_fmpy\_explore.py

```
In [5]: %%bash
git clone https://github.com/janpeter19/BPL_YEAST_COB_Batch
```

Cloning into 'BPL\_YEAST\_COB\_Batch'...

```
In [6]: %cd BPL_YEAST_COB_Batch

/content/BPL_YEAST_COB_Batch
```

```
In [7]: run -i BPL_YEAST_COB_Batch_fmpy_explore.py
```

Linux - run FMU pre-compiled OpenModelica

Model for the process has been setup. Key commands:

- par() - change of parameters and initial values
- init() - change initial values only
- simu() - simulate and plot
- newplot() - make a new plot
- show() - show plot from previous simulation
- disp() - display parameters and initial values from the last simulation
- describe() - describe culture, broth, parameters, variables with values/units

Note that both disp() and describe() takes values from the last simulation and the command process\_diagram() brings up the main configuration

Brief information about a command by help(), eg help(simu)  
Key system information is listed with the command system\_info()

```
In [8]: %matplotlib inline
plt.rcParams['figure.figsize'] = [25/2.54, 20/2.54]
```

```

warnings.filterwarnings("ignore")

## BPL\_YEAST\_COB\_Batch - demo

```
In [10]: from optlang import Model, Variable, Constraint, Objective
```

```
In [11]: process_diagram()
```

No processDiagram.png file in the FMU, but try the file on disk.

```
In [12]: describe('culture'); print(); #describe('liquidphase')
