

Notes YEAST_COB_Batch constraint-based approach

In [1]: `run -i BPL_YEAST_COB_Batch_explore.py`

Windows - run FMU pre-compiled JModelica 2.14

Model for the process has been setup. Key commands:

- `par()` - change of parameters and initial values
- `init()` - change initial values only
- `simu()` - simulate and plot
- `newplot()` - make a new plot
- `show()` - show plot from previous simulation
- `disp()` - display parameters and initial values from the last simulation
- `describe()` - describe culture, broth, parameters, variables with values/units

Note that both `disp()` and `describe()` takes values from the last simulation and the command `process_diagram()` brings up the main configuration

Brief information about a command by `help()`, eg `help(simu)`

Key system information is listed with the command `system_info()`

In [2]: `plt.rcParams['figure.figsize'] = [20/2.54, 16/2.54]`

No processDiagram.png file in the FMU, but try the file on disk.

Try using LP in each step
